

Our Science

We utilize a unique and patented blending process of products that are fully compliant within the EPA and FDA code of federal regulations. Our blending process helps supercharge surfactant-based cleaning agents; creating a unique alternative to traditional wound care, cleaning and biosecurity efforts with third-party efficacy testing to validate all claims

SYNBIONT for the Dairy Industry

Synbiont Ag Wash is a versatile, multipurpose cleaning and wound care product for dairy cattle and their surroundings.

The SYNBIONT Story

We fill an environmentally friendly void in a market full of toxic chemicals with warnings and precautions. We care about our environment. We care about the animals that our product interacts with. We care about the high quality results our customers receive.

We care ... and our products back us up.

Our History

We're a family owned company with over 40 years in the agricultural industry and we use our products in our own farms, barns and kennels. Synbiont was initially developed for use in the fresh produce industry to enhance food safety efforts. Our chemistry was created to enhance commercial grower efforts to clean fruits and vegetables and help eradicate foodborne bacteria and viruses prior to human consumption. The natural step into the animal health arena provides animal owners and animal facilities an effective, veterinarian approved, environmentally friendly alternative to help clean harmful pathogens such as E. Coli, Salmonella, Staphylococcus, Listeria, EHV-1, H1N1 and Canine parvovirus.

Key benefits:

- Improve farm sustainability-preferred alternative to harmful chemicals
- Reduce downtime – improve hoof care and lameness concerns
- Optimize Dairy operations – enhance primary chemicals
- The new, safe alternative to bleach and chlorine

Key features:

- Cleans areas prone to host pathogens, viruses, bacteria and fungi such as E. Coli, Salmonella, Staphylococcus, and Listeria
- Safe to apply on animal or anywhere they frequent (facilities, stalls, parlors, foot baths, water buckets and feeders)
- Unlike a disinfectant, it cleans an area in two ways: first it cleans the host area where pathogens grow by emulsifying dirt and organic load while compromising the cell wall of the pathogen
- Non-corrosive, no re-entry delays, non-toxic
- Residual effectiveness of 7-21 days
- Safe to use with other chemicals

How to use:

- Recommended ratio of 1:50 - 2.5oz of concentrate per gallon of water
- 1 gallon of concentrate makes 50 gallons of multipurpose wash
- Preferred application methods are commercial spray systems, hose-end or pump-up sprayers

Active ingredients:

Patented food-grade safe blend of alkyl sulfonate and an alkyl sulfate

Ag Wash is ideal for:

- Cleaning animals or hard surfaces
- Disinfecting
- Nurseries
- Fly suppression
- Odor control
- Wound Care / Pink eye
- Hoof care / Hairy Wart
- Foot baths
- Lameness issues

Ag Wash available in:
1 Gallon, 5 Gallons, 55 Gallons & 250 Gallons
